# How it helps your business

## 1 Asset control

Asset control allows you to view all assets in your fleet and logically separate them by customer or subcontractor and site. You have the option to provide users with varying levels of access, for example, a customer needs login access. This is all accessed remotely online via computer or smartphone.

## 2 Reports

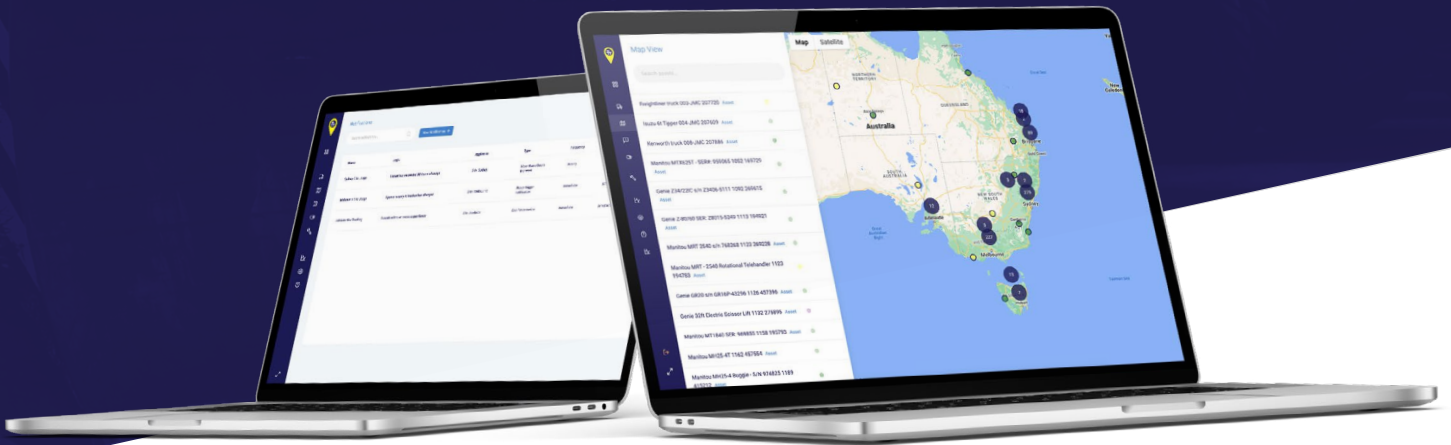

Teletrack's reporting system allows you to export asset usage information into Excel or PDF format with the option of automated scheduled reports via email. Set daily, weekend and over usage reports to track rental leakage.

## 3 Notifications

Receive real-time SMS / Email notifications for assets going in and out of set geofences, power disconnections and low battery power for battery trackers.

## 4 Map view

Track the current and past locations of assets and detailed usage information. Navigate subsections of your fleet with our asset segmentation options. rental leakage.

## How it works

### Next-generation tracking hardware options

- **TRAKAX** TrakaX - ultra high functionality tracker that can read diagnostic fault codes and many connectivity options for in-building, underground and mine site applications. (4G-CAT-M1, Bluetooth, WiFi, LoRaWAN, Iridium, CANBUS, RS232/485, USB & more)
- **Cal/Amp** CalAmp LMU2630MB - reliable IP67 rated 4G CAT-M1 tracker with Bluetooth and immobiliser.
- **digital matter** Digital Matter - supporting wired-in options like the G70 and Dart3 and the new Yabby Edge battery trackers with 10-year battery life.

### Attachments & trailer tracking

- Use the Digital Matter Yabby Edge an IP67-rated tracker, to remotely monitor the usage and location of valuable trailers and attachments.
- Teletrack has developed an algorithm that differentiates attachment movement to its actual usage.

### Real-time visibility

- See your assets move on Teletrack Map View as it happens with map changes displaying every 10 seconds.
